Introduction

Welcome to Genesis. We would like to thank you for your interest and for taking the time to read through our documentation.

We created Genesis Coin because we are passionate about cryptocurrency and love building a community. Not only that, but we also feel that there is a market for genuine ERC20 tokens which have the benefit of running on the Ethereum blockchain and being compatible with a number of dApps created specifically to work with the blockchain. That gives us immense flexibility as well as providing us with a safe and secure platform that is also extremely fast.

At the time of Genesis Coin's release, there are hundreds of ERC20 tokens being released with a number of those trying to ride on the back of the success of coins such as Bitcoin, Litecoin, Monero, Dash etc. Instead of going down that route, we want to create something unique to us and our community. We hope you can appreciate the amount of time we have committed to Genesis to make us unique in an attempt to bring something a little different to the table when it comes to ERC20 tokens.

Our aim is to put the community at the very forefront of what we want to achieve. Without a thriving and active community, any coin or platform is essentially dead. We also care about being open and transparent. We want to build trust and show you that Genesis is not a pump and dump coin. In fact, it will be more than just a coin moving forward. Genesis will be a platform.

Transparency

One of the most important values to us is being trustworthy and reputable. We want our community and the wider industry's opinion of us to be positive and we feel that one of the ways we can achieve this is by being as transparent as possible with our community. Therefore we have made the token code open-source, allowing anyone and everyone to view the code that created the Genesis Coin. Future projects and Dapps will also be open-source. You can view this by visiting our Github page [here](#).

As part of our coin distribution, which you can see on page 6, you will notice that Genesis Coins will be used for different purposes. It's of the utmost importance to us that our community is aware of not only what these coins will be used for but also where they are stored. Below are all the addresses of each account that we own that holds our own Genesis Coins. You can view these addresses on Etherscan.io to monitor our wallets and ensure that coins aren't being dumped by the development team. We hope that by doing this, it will create transparency and give you peace of mind that this is a genuine project and not a quick dump and pump scheme.

Genesis Coin Specifications & Features

Name: Genesis

Symbol: GEN

Decimals: 18

Total Supply: 16,000,000

Contract Address: 0x9dfe4643C04078a46803edCC30a3291b76d4c20c

Genesis Coin is an ERC20 token created on the Ethereum Blockchain with a fixed supply of 16,000,000 coins. The three core values of Genesis Coin is being fast, secure and flexible.

The Ethereum blockchain allows us to put these three values right at the very heart of what we wish to achieve. Genesis will be more than just a coin though. In the future Genesis Coin will be the fuel that powers Genesis. More on that later.

The average transaction takes only 15 seconds to be mined and verified on the Ethereum blockchain, making Genesis one of the fastest coins on the market.

Not only that, but as Genesis is built on the Ethereum blockchain, it is able to take advantage of the security offered by the network. Genesis Coin also uses the SafeMath code to prevent overflows and underflows from occurring.

Speed - Faster than Bitcoin and many other cryptocurrencies on the market

Security - Ethereum is one of the most secure public blockchains

Transparency - Project is open-source and verified on Etherscan.io

Flexibility - Genesis can be used to buy and sell, trade and will help power the Genesis platform.

Compatibility - Supported by multiple Ethereum wallets that support ERC20 tokens

ERC20 Standard Token

Genesis Coin follows all the ERC20 standards meaning that it is compatible with any wallet that supports ERC20 tokens, such as MyEtherWallet and MetaMask.

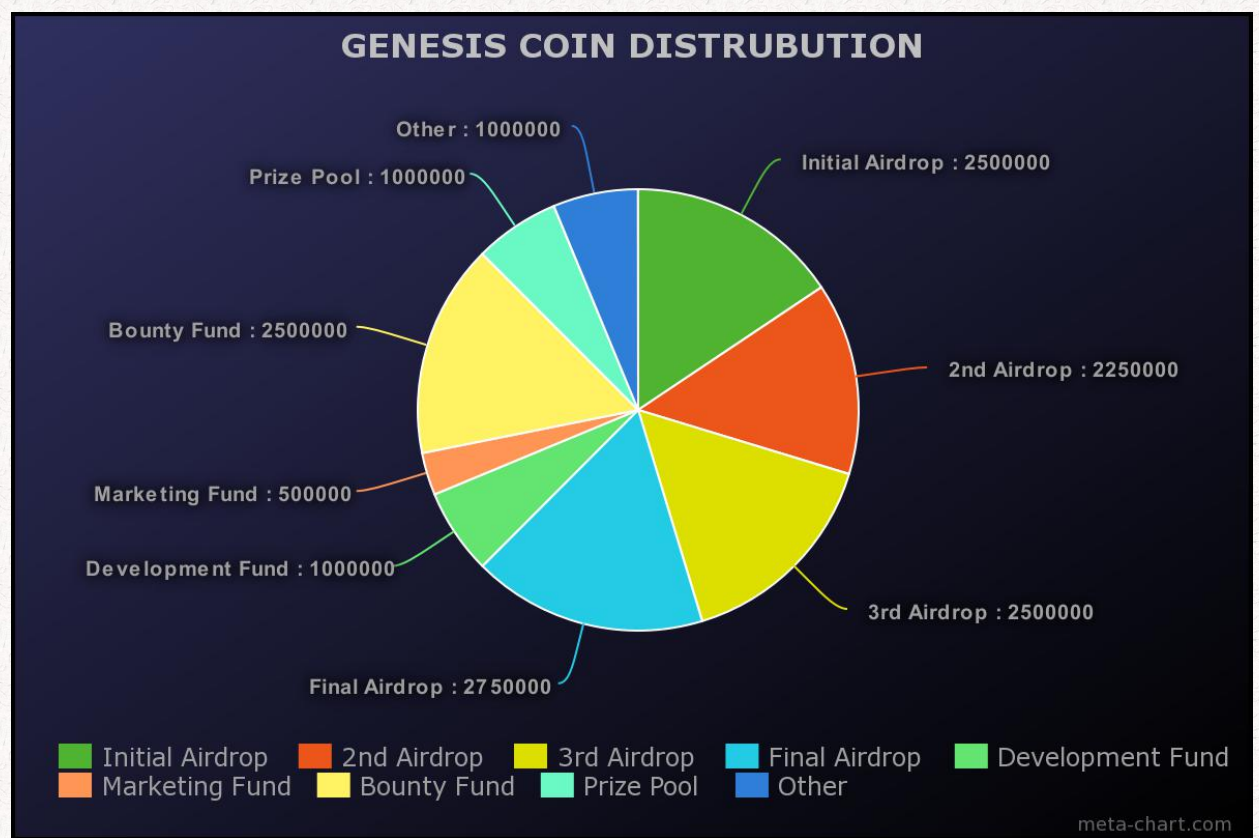

By using an ERC20 standard token, it also means that the Genesis Coin can be traded on EtherDelta from day one. It also means that we could potentially get listed onto other exchanges that also support ERC20 tokens.

ERC20 tokens also have the added functionality of being integrated into websites and applications by creating contracts on Ethereum and connecting to the Ethereum blockchain through Web3 and MetaMask. This gives coins such as Genesis an actual platform to develop meaningful and functional Dapps on right from the start. This means that unlike Bitcoin, ERC20 tokens can have other uses other than just being used as a currency.

To make Genesis Coin as safe as possible, we have also used the SafeMath library when creating the token contract to ensure that the coin isn't at risk of overflows and underflows which could cause serious disruption.

You can view the source code for the Genesis Coin on our Github page. See page 3.

Distribution of Coins

There will be a fixed supply of 16,000,000 Genesis Coins. The majority of these coins will be released into circulation by the end of November through our Airdrop.

Below we have outlined the distribution of Genesis Coins.

Airdrops: 10,000,000 (62.5%)

Development Fund: 1,000,000 (6.25%)

Marketing Fund: 500,000 (3.125%)

Bounty Fund: 2,500,000 (15.625%)

Prize Pool: 1,000,000 (6.25%)

Other: 1,000,000 (6.25%)

Airdrop

To distribute Genesis Coins amongst the community, we are running a free Airdrop.

The Genesis Coin Airdrop will be done in four phases. Each phase will have a limited amount of coins to airdrop. This is as follows:

Initial Airdrop: 2,500,000 Genesis Coins

Second Airdrop: 2,250,000 Genesis Coins

Third Airdrop: 2,500,000 Genesis Coins

Final Airdrop: 2,750,000 Genesis Coins

Each Airdrop phase will reward a different amount of Genesis Coins per person, meaning that only a limited number of people will receive coins at each phase. Everyone who is successful at that phase will receive the same amount each. This is as follows:

Initial Airdrop: 625 people receiving 4000 Genesis Coins each

Second Airdrop: 750 people receiving 3000 Genesis Coins each

Third Airdrop: 1000 people receiving 2500 Genesis Coins each

Final Airdrop: 1375 people receiving 2000 Genesis Coins each

That means that a total of 3750 people will be receiving a free Airdrop of Genesis Coins.

We decided to spread out the distribution of Genesis Coins in this way to give everyone a fair opportunity to take part in the Airdrop. While this Airdrop is done on a first come, first serve basis, we want to make sure that everyone has a chance, regardless of how early or late you discovered Genesis.

Donations

Right now, Genesis isn't a full-time project. That's because unfortunately, bills need to be paid and that means that for now at least, we have other jobs to help pay for our monthly expenses.

Of course, we would love to work on Genesis full-time. Being able to dedicate all of our time to the project would be our dream and we're confident that one day we will be in a position to achieve that. We have big ambitions and some big ideas planned for the future.

To help us achieve this dream and help move Genesis forward at a faster pace, we are allowing anyone who wishes to, to contribute to the project by donating. Donating any amount of Ether is most definitely not expected and anyone who does donate will have our full appreciation and gratitude.

Any donations made before 30 November 2017 will be rewarded with the following amounts of Genesis Coin. Please note that only 500,000 Genesis Coins are available for donations.

1 Ether = 5000 Genesis Coins

You can donate to Genesis by sending Ether to:

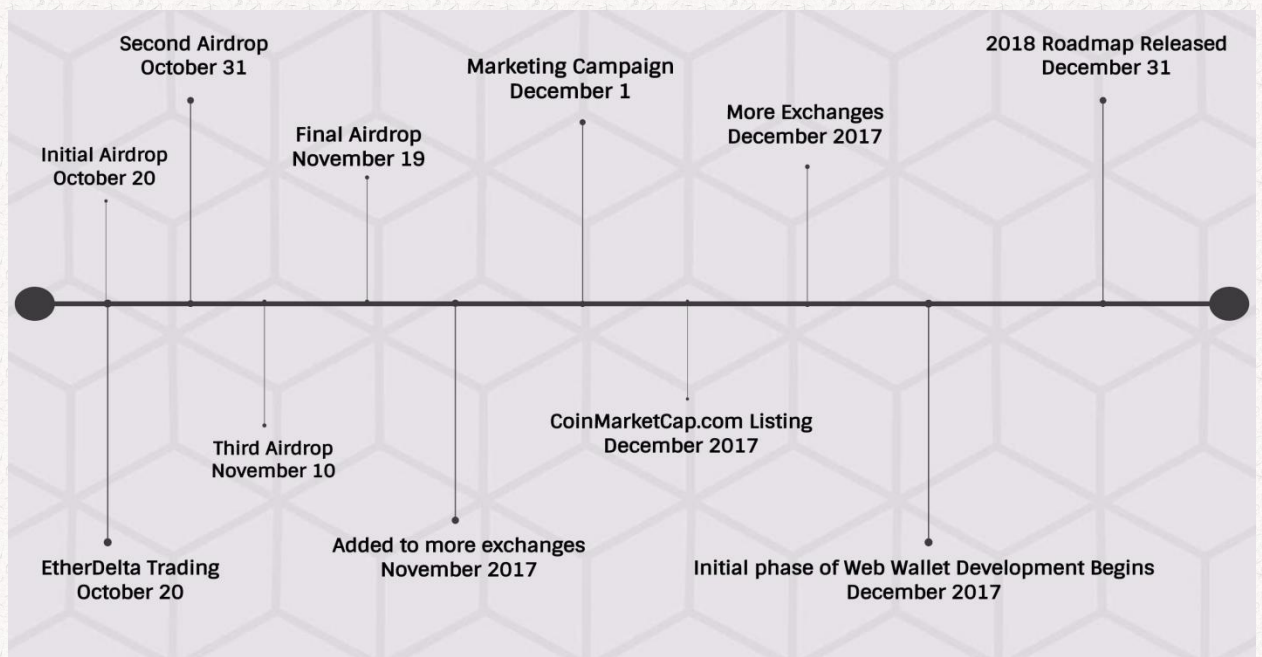

0xed5d389F33Cde90193e60265d79c4b03fb127140

All donations will go towards the running of Genesis as well as helping to get Genesis Coin listed on additional exchanges.

By sending Ether to the address above, you accept that you are donating to the Genesis project. You are receiving some Genesis Coins to show our appreciation for donating to the project. After November 31, donations will no longer reward 5000 Coins per 1 Ether.

Roadmap

This is an overview of what we have planned for Genesis Coin in 2017. The remainder of 2017 will consist primarily of distributing coins and working on being added to more exchanges.

Our roadmap for 2018 will go into more detail about the future of Genesis Coin and the development of the Genesis platform. This will be revealed at the end of 2017.

Future

Genesis will be more than just a coin. It will be a platform. Once we have finished distributing Genesis Coins to the community, we will embark upon a marketing campaign to spread the word of Genesis and to gain interest in the project.

The very first stage of our project is centered around the Genesis coin and laying the foundations to give us the best start possible. Once this is concluded, development will finally be able to begin.

Our plan is to begin development of the Genesis Web Wallet in late December 2017 with a potential release for Q1/Q2 2018. Once the web wallet is up and running, holders of Genesis Coin will be able to check their balances as well as being able to send and receive Genesis Coins through our site. Over time increased functionality as well as an upgraded UI design will be added.

After this, development on the Genesis Decentralized Exchange will commence. The exchange will be tied to the Web Wallet and will enable users to deposit and trade Genesis Coins with other users. Initially it will support GEN/ETH trading however we plan on expanding the exchange to support other tokens to offer a richer trading experience. As of yet there is no release but we would like to have it up and running by Q4 2018 at the latest.

Towards the end of 2018, beginning of 2019, we will reveal our plans for the next project. This will be a much bigger project and will see Genesis move into the mainstream by attempting to solve a current issue. We can't speak too much on this project just yet but we will release a proper whitepaper for this project in 2018.

Of course, this plan isn't written in stone and is subject to change and can be influenced by a number of factors which could positively or negatively affect development.
